About anic GmbH

Since the year 2000, anic GmbH has excelled in IT project management and software development, particularly in the chemical and pharmaceutical sectors. We offer IT consulting in R&D, process engineering, manufacturing, and GxP-compliant IT/OT solutions. Our mission is to deliver tailored, high-quality IT solutions that perfectly meet our clients' needs.

anicomply – Create and Publish Compliant EBR Recipes Within Minutes Instead of Months!

What is anicomply?

anicomply is a **revolutionary** web **application** with which **EBR recipes** can be published **within minutes in a fully digital process**. After a very short design process of the production workflow using Microsoft Word® as an editor, only specific entries such as actual return values from the production process can be changed by anicomply. Even existing SOPs or instructions can be made digitally available after inserting a few markers and uploading them to anicomply – within minutes! This provides **unprecedented flexibility** for EBR systems in validated environments. This makes anicomply **the perfect solution for use in validated highly dynamic production environments!**

Why anicomply?

The Challenge: everything is becoming faster and more dynamic – processes, the market, customers, production and production facilities. But what about recipe creation, documentation and validation? How quickly can you react to changing customer requirements or production batches? EBR/MES systems are often the bottleneck when it comes to changing production workflows within minutes while remaining compliant.

The Solution: anicomply fulfills the requirements of Industry 4.0 for EBR systems and offers:

- **Dramatically Reduced Time-to-Market and Time-to-Value** through the fully digital creation and customization of your workflows within minutes instead of months.
- **Enormous Savings Potential** by eliminating the need for time-consuming training or external programming and feedback loops to create and change your workflows.
- **Maximum Ease of Transition** from paper-based workflow to true digital workflow without outdated “paper-on-glass” solutions.
- **Compliance in the Highly Regulated and Validated Area** while increasing the dynamics of your production process.
- **Flexibility and Mobility** through cross-platform workflow access to our web application.
- **User-Friendliness and Accessibility** through “no-code” which enables non-developers from specialist departments to create or adapt workflows quickly and cost-effectively.

Ready for the Next Step?

Start your Success Story with anicomply!

Choose anicomply from anic - your specialist with many years of experience in the fields of chemical IT, pharmaceutical IT, pharmaceutical research and pharmaceutical process engineering.
